

FOOD, VEGETABLES AND FRUIT PROCESSOR

ABSTRACT OF THE DISCLOSURE

A food, vegetables and fruit processor comprises a base having therein an operating motor, a lower cover, a cutting seat and an upper
5 cover. Wherein the upper cover is provided with an inclined feed-in pipe extending downwardly therefrom, one end of the feed-in pipe forms on the surface of the upper cover a material inlet, the other end of the feed-in pipe forms a material outlet. Food, vegetables and fruit can be cast into the feed-in pipe, and are pressed tight with a material pushing
10 plunger to render the food, vegetables and fruit to be perfectly and smoothly cut or ground in an energy saving mode. The present invention is applicable to using as a food, vegetables and fruit processor having the functions of squeezing juice and grinding food.
